

Remote Patient Monitoring (RPM) Made Easy

Turn-Key Solutions for Remote Patient Monitoring Including Staff Training, Patient Onboarding, Software Integration, Device Distribution and Care Coordination.

Increase Revenue, Reduce Costs, Improve Outcomes

New CPT Codes released by CMS in 2019 provide an incentive for physicians to offer better management of chronic conditions through the use of Remote Patient Monitoring and the new rules make it easier for physicians and healthcare organizations to partner with health-tech companies to provide the services, software and monitoring devices needed to successfully launch an RPM program.

For some practices, the technology, care coordination and start-up costs discourage them from offering these services. That's why **RPM in a Box** partnered with **HealthKOS** to offer turn-key solutions that allow physicians to choose the program that's right for them. Together, we are helping physician practices reduce costs, improve outcomes and capture increased revenue generated by the advanced level of services they are providing.

Designed by Physicians:

RPM in a Box was designed by physicians who wanted an efficient and practical way to reduce costs, improve outcomes and reduce unnecessary utilization.

Improves Patient Engagement:

2-Way Communication including monitoring, medication and appointment reminders. **RPM in a Box** also provides patients with click-to-call convenience and video-chat options.

Easy to Use for Patients and Providers:

The **RPM in a Box** team provides onboarding and education to help new providers establish seamless workflows and help patients utilize their devices and the patient monitoring app.

US Based Customer Service:

Contact our Customer Service team anytime for help with our platform or devices.

Primary Care Physicians With 200 Patients Enrolled in RPM Could Generate More Than \$300,000 in Additional Revenue While Reducing Costs and Improving Outcomes.

CPT 99453: This code reimburses up to **\$21** for costs associated with initial device set-up and patient education on the use of devices such as blood pressure cuffs, pulse oximeters and even scales.

CPT 99454: Allows for the reimbursement of remote monitoring of physiologic parameter(s). For example, weight, blood pressure, pulse oximetry and respiratory flow rate. CMS will reimburse approximately **\$69 per patient, per month**.

CPT 99457: This code covers remote physiologic monitoring treatment management services. CMS requires 20 minutes or more of professional time from clinical staff, physicians or other qualified healthcare professionals, along with interactive communication with the patient or caregiver, each calendar month. The reimbursement for this service is approximately **\$59 per patient, per month**.
